JET 15” Drill Press

<table>
<thead>
<tr>
<th>Description</th>
<th>Drill Press – Model JDP-15M/MF</th>
</tr>
</thead>
<tbody>
<tr>
<td>Size / Horse power</td>
<td>15” / 3/4 HP / 200-3600 RPM</td>
</tr>
<tr>
<td>Power source</td>
<td>115 volt through power cord</td>
</tr>
<tr>
<td>Uses</td>
<td>Drilling/Boring holes into various material (metal, wood, Plexiglas, plastic)</td>
</tr>
</tbody>
</table>

**Safety Precautions**

**Hazards**
- Flying debris (potential eye damage)
- Electrical shock
- Abrasions
- Entanglement of hair or clothing

**Training**
- Shop Safety Fundamentals
- Site Specific Training

**Protective Equipment**
- Safety glasses
- Hearing protection
- Avoid loose fitting clothing
- Tie back long hair

**Operation**

**Startup**
1. Put on PPE listed above
2. Ensure work area is clean and free of obstacles
3. Make necessary adjustments for safe operation
4. Inspect the tool for damage or obstructions to operation
5. Place material so that it is resting against the left side of the column to prevent material from spinning or securely fasten material to the table
6. Make sure the drill chuck is tightened down on the drill bit and the chuck key has been removed
7. Turn on the drill press using the START button located on the front of the tool
8. Begin work
9. Slowly feed drill bit towards material, avoid feeding material too quickly or too slowly
10. Keep hands clear of drill bits

**Depth Stop Adjustment**
1. Mark a reference to the depth the bit will drill into the material
2. With the drill bit in the chuck, lower down feed handle to advance bit to your mark
3. Advance the lock nuts on the depth stop rod until they are snug to the seat
4. The drill bit will now only advance to this depth
Changing Spindle Speeds – **Performed By Authorized Personnel ONLY**

1. Use the pulley/belt arrangement chart found on the inside of the pulley cover when changing speeds
2. Unplug the drill press from the power source
3. Loosen the two bar knobs found on each side of the head assembly
4. Rotate the tension adjuster clockwise to bring the motor base as close to the head as possible
5. Change the location of belts per pulley/belt arrangement chart for desired speed
6. Rotate the tension adjuster counterclockwise to tension the belts, belts are properly tensioned when finger and thumb pressure midway between the two pulley causes approximately ½” deflection
7. Tighten the two bar knobs

**Shutdown**

1. Turn off the drill press using the STOP button located on front of the tool
2. Allow the chuck to come to a complete stop on its own
3. Remove work piece for table top

**Maintenance**
