**Dear Valued Customer:**

Our records indicate that you are a long-valued radioimmunoassay (RIA) customer and have recently purchased RIA products.

Siemens Healthcare Diagnostics has made a strategic decision to phase out operations and support of RIA due to their mature product lifecycle and the overall trend toward the use of newer technologies. Siemens will discontinue the RIA product line after September 30, 2014. This includes the RIA-specific reagents and consumables listed below as well as product-line support. We will make every effort to ensure supply availability until September 30, 2014, to assist you within the transition period.

After September 30, 2014, assistance in resolving method-related issues for RIA products will no longer be available, either on-site or by telephone via our support centers.

Newer technologies are now available, some of which may be perfect alternatives for your laboratory, such as the ADVIA Centaur<sup>®</sup>, IMMULITE<sup>®</sup>, and Dimension Vista<sup>®</sup> methods. For assays with specific sensitivity requirements satisfied only by RIA technology, we suggest investigating a non-Siemens vendor. If you would like more information on an alternative Siemens platform, please contact your Siemens sales representative for suitable solutions to your testing needs.

We value your support of the RIA portfolio over the years and trust we can assist you with the transition to another Siemens solution for your laboratory. Please forward this notification to the appropriate person in your organization. We regret any inconvenience this may cause.
